

Python Lab2 : f-string

The image shows a code editor window at the top and a terminal window at the bottom. The code editor displays a Python script named `lab2.py` with the following content:

```
python-project > lab2.py > ...
1  # write a nice message using f-string
2
3  city = "Ottawa"
4
5  temperature = 72
6
7  sentence = f"The current temperature in {city} is {temperature}°C"
8
9  print(sentence)
10
```

The terminal window shows the execution of the script. The command `python .\lab2.py` is entered, and the output is `The current temperature in Ottawa is 72°C`. The terminal prompt is `PS C:\Users\23767\Desktop\AWS-COURSES\git-github\python-project>`.
